

Pronofoot specifications

I. OBJECTIF

This document describes the major features of the Pronofoot service we want to run.

II. PRODUCT SUMMARY

The service is a betting application where users are given to prognostic a number of football matches and win money according to true prognostics. The business is for BURUNDI.

Let's call Prono 7 prognostic of 7 matches, Prono 10 prognostic of 10 matches and so on.

Wager amount is the amount player will pay to register a prognostic betslip.

The jackpot amount is the minimum winning amount guaranteed for Rank 1 (all matches correct). If there is no Rank 1 Wining (jackpot), the amount dedicated to the rank 1 will be added to the next Game.

For every P7, P10, ...we will define the winning ranks and the percentage of money assigned to the rank (for example for P7, 55% assigned to Rank 1 and 45% assigned to Rank 2, meaning there are only two winning ranks: 7/7 and 6/7 correct matches). The players share equally the money assigned to the rank.

Agents network register players, help players to do cashin and cashout and issue coupons for non connected players and earn commission for cashin, cashout and their player's activity (GGR commission).

The deliverables are mobile application (Android and ios) which is same for users and agents and Backend (website) for admin. The common features to all application such as register/login/logout, reset password, edit personal information (email, mobile) are not rewritten in features.

III. ADMIN CAPABILITIES

III.1 Settings

- Create Prono Sport Categories (example Football, Basketball)
- Create Games for every category (example Prono 7, Prono 10, Prono 15)
- Set wager Amount to participate to the Prono sport

- Set the number of times user can select, triple (1N2) and double (1N or N2) for Prono 7, Prono 10,A Triple is when user selects all for a match : Team 1 will win or Draw or Team 2 will win. Double is when user selects two possibilities: Team 1 or draw, draw or team 2, team 1 or team 2. Triple will multiply Wager Amount by 3 and Double will multiply Wager amount by 2.

Let's say for Prono 7, user is allowed to select 2 triples and 3 doubles. If Wager Amount is 1,000 BIF and user selected 2 triples and 3 doubles mean he will pay $1,000 * 3 * 3 * 2 * 2 * 2 = 72,000$ BIF.

- Set the jackpot (guaranteed winning Amount) for every game (Prono 7, Prono 10,....)
- Set winning ranks for every game and percentage of Amount dedicated to the rank.
- Set Agent commissions for cashin, cashout, GGR and coupons issuance.

III.2 Prono Games management

- Create a Prono Game (Prono 7, Prono 10,...) and enter the matches and their events information, the start time and the closing time;
- Add/edit the results of the matches.

III.3 Users management

- Create admin users and assign rights
- Add/edit/search/filter players
- Add/edit/search/filter agents
